

Treatment of Spondylolisthesis is not always Surgery

Grade-I Spondylolisthesis with good canal APD diameter can effectively be managed by **Interventional Pain** procedures

Spondylolisthesis is a spinal condition that causes **lower back pain**. It occurs when one of your vertebrae, the bones of your spine, slips out of place onto the vertebra below it

Cooled Radiofrequency Ablation (C-RFA)

It is Minimally invasive, Non-opioid, Long-lasting treatment for chronic low back pain

Surgery is indicated when there is instability, higher grade, multiple levels involved,
