Sub: Mapping of Goods Tariff commodities with Harmonized System of Nomenclature (HSN) Codes.

Please find enclosed a copy of report prepared by Traffic Transportation Directorate and Business Research Unit of Railway Board on the above subject.

It has been decided by the Competent Authority that this list will be used by Railways for systematic classification and also for harmonization of customs and trade procedures. On entering the commodity name, the system should automatically allow for choosing the most relevant HSN code and be verified against the class of rate charged against the commodity.

This will be available at the time of issuance of Railway Receipt as drop-down of commodities and HSN code.

CRIS/ FOIS is requested to develop a system accordingly.

This issues with consultation of Traffic Transportation and concurrence of Accounts and Finance Directorates of Ministry of Railways.

1. Introduction

Indian Railways is in the business of transportation of goods and passengers and earns its major revenue from the transportation of goods. Carrying more than 1.2 billion tonnes of freight traffic every year over a network of 68000 kms and with network touching almost every nook and corner of the country, Indian Railways is the backbone of India's logistics sector.

Railway deals with the transport of various commodities likes Coal, Fertilizers, Iron and Steel, Milk, Salt, Animals, other household and constructional commodities. Transportation of all goods attracts different types of taxes, Goods and Service Tax (GST) is one of them.

In this document, the Unit has extracted Goods Tariff commodities list and HSN codes commodity list and mapped the Goods Tariff commodities with HSN codes. This shall help IR in tracking of Taxes and tracking of goods movement.

2. Goods and Service Tax (GST)

On July 1st 2017, the Goods and Services Tax was implemented in India which was introduced to replace the Indirect taxes such as value added tax, service tax, purchase tax, excise duty, and so on. GST is levied on the supply of certain goods and services in India..

GST is a destination-based consumption tax. Under destination-based taxation, tax accrues to the destination place where consumption of the goods or services takes place. Present GST Structure has 7 schedules having different rate slabs for goods¹.

Figure 1: Present GST Rate Structure

Schedule 1	Goods at NIL Rate
Schedule 2	Goods at 0.25% Rate
Schedule 3	Goods at 3% Rate
Schedule 4	Goods at 5% Rate
Schedule 5	Goods at 12% Rate
Schedule 6	Goods at 18% Rate
Schedule 7	Goods at 28% Rate

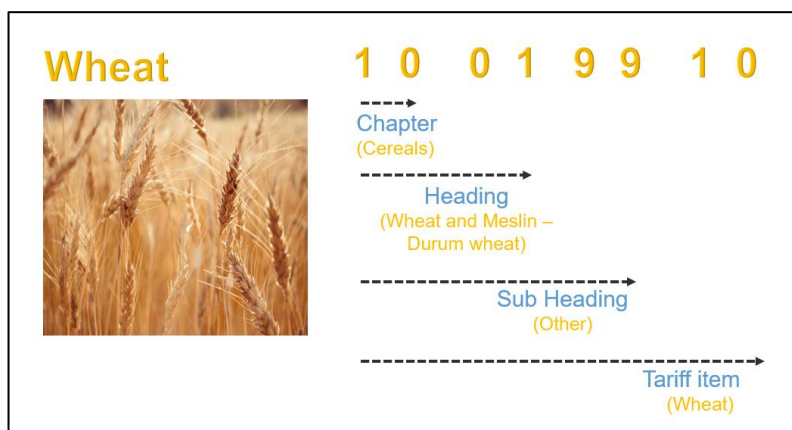

3. Harmonised System of Nomenclature

HSN stands for Harmonised System of Nomenclature code and is adopted all over the world for classifying thousands of commodities under various sections. It was introduced by World Customs Organization (WCO) in 1988. Since then, 5 revisions have been taken place. Currently HS 2022, which is the seventh edition of the Harmonized System (HS) nomenclature, is being used worldwide for the uniform classification of goods traded internationally. The HSN system doesn't only help customs agents – it also has important implications for GST. It helps in making GST systematic and globally accepted. By using HSN codes, there is no need to upload a detailed description for each good falling under the GST. This allows for the automation of GST returns, saving time and money for the tax authority. Having correct HSN Code of a product is necessary during return filing for an accurate levy of GST rates on products in India. This would ensure seamless compliance of GST rules by taxpayers.

The HSN nomenclature has 21 sections which are further classified into 99 chapters. The chapters are then divided into headings which are 1244 in number. The headings are subsequently divided into 5224 subheadings. Let us consider example of wheat, the HSN Code for wheat is 10019910. The figure below shows various component of the code.

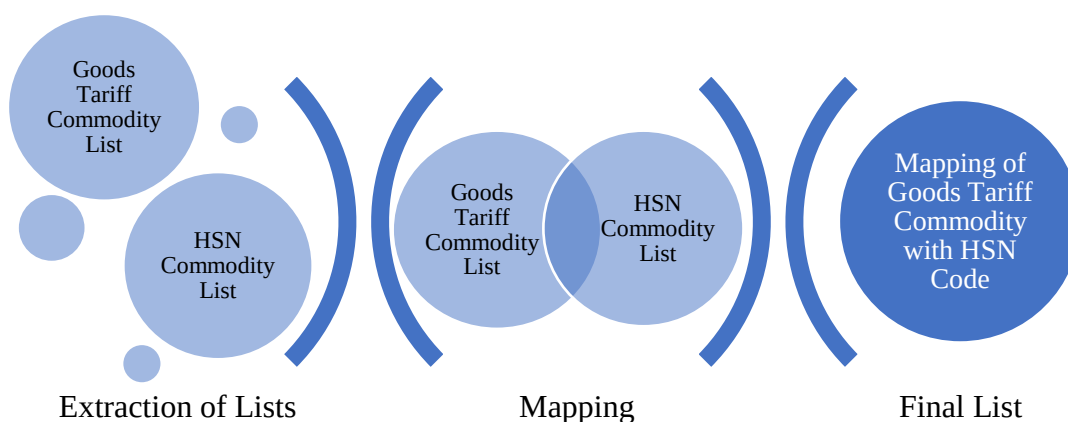

Figure 2: Components of HSN code

4. Methodology

The unit has extracted the list of freight commodities carried by railways as per the Goods Tariff No. 49 and GST HSN Code directory from GST portal. The unit then mapped the freight commodities with the commodities in HSN directory. The Goods tariff commodities which are found in HS directory are extracted and mapped with their HSN Codes (can be found in Annexure 1). The Goods tariff commodities for which HSN Code are not directly assigned, or exact match is not found, in that case the commodities in goods tariff were mapped with the most similar commodities present in HS Nomenclature (can be found in Annexure 2).

Figure 3: Methodology adopted

5. Result and Way Forward

Indian Railways deals with transportation of more than 650 commodities, thereby appropriate classification of such commodities aligned with classification of commodities across various modes of transport and international standards becomes very important. This would benefit in tracking complete logistic movement of commodities across various modes, which could provide deeper insights into movement characteristics of various commodities. This would also allow for ease in GST filing. TTBRU unit mapped commodities of Goods tariff and GST HSN code list and prepared a consolidated list (Annexure 1) and the commodities for which exact match not found similar commodities were identified (Annexure 2).

This list can be used by Railways for systematic classification and also for harmonization of customs and trade procedures. On entering the HSN codes, the system will automatically pick up the related tax rates of the commodities under the GST regime, thus simplifying the trade procedures.
